EDUCATION

Columbia University <i>M.S. in Computational Design Practices, Human-Computer Interaction</i> Relevant Coursework: Mapping Systems, Computational Modeling, Spatial UX, Prototyping in Urban Tech	New York, NY <i>Graduated May 2026</i>
New York University <i>B.F.A., Interactive Media Arts; Minor in Computer Science</i> Relevant Coursework: Web Design, Computer Programming, Creative Computing, Physical Computation	New York, NY <i>December 2024</i>

EXPERIENCE

Vendelux <i>Product Designer B2B Saas, Series B Startup</i> - Led the end-to-end design of Segments, a real-time audience-building platform, from concept through company-wide launch across all customer accounts, replacing hours-long manual list workflows with reusable dynamic filtering; drove 7.4K weekly API interactions, nearly 2,000 audience-result queries, and 38 customer-created segments in the first observed post-launch week. - Launched Event Organizer MVP in 3 weeks, a new product built on Segments that gives event organizers real-time visibility into attendee data and event goals; used rapid prototyping and experimentation to iterate on the filtering model, nearly doubling condition requests per query from 0.44 to 0.79. - Designed and shipped a unified design system across 5 platform surfaces (Attendees, Organizations, Segments, Event Organizer MVP, shared components), building a reusable icon framework (80 icons across 20 filters), a 3-state status system, and a 4-variant Toast component library. Built an agentic AI workflow (Figma MCP plugin API) that autonomously scripted component variants and design tokens.	New York, NY <i>Mar 2026 – Present</i>
Columbia Robotics and Rehabilitation Lab <i>Web Designer & Graduate Researcher</i> - Led user-centered research end-to-end across 40+ hours with 8 SCI patients and 4 physical therapists, synthesizing findings into affinity maps that directly shaped the engineering team's hardware priorities and delivered a 25% increase in force consistency and 30% higher user-reported comfort in usability testing. - Designed, built, and shipped the lab's public-facing site end-to-end with custom HTML/CSS, crafting distinct user flows and content architecture for four audiences (clinicians, funding agencies, patients, academic collaborators) from a single content system.	New York, NY <i>May 2025 – Mar 2026</i>
Stealth Startup <i>User Experience Designer Early-stage AI product</i> - Designed 200+ screens from concept to high-fidelity prototype for an early-stage AI product on a 4-person team, building an agentic AI workflow that let the team move from concept to shipped MVP screens autonomously in 3 weeks. - Owned the interaction design for weekly releases, collaborating directly with the CTO and front-end engineers to translate technical constraints into design decisions and ship pixel-accurate experiences through Figma Dev Mode.	New York, NY <i>Nov 2025 – Jan 2026</i>
Richemont (Chloé) <i>Assistant Merchandiser</i> - Led the design and presentation of the A/W24 and S/S24 capsule collection strategy to Chloé's Managing Director and Korea executive team, translating product vision into a narrative that won alignment across every Chloé boutique in the region. - Owned daily sell-through analytics in SAP and BEx Web for regional offices and built the training system 100+ boutique managers nationwide used to launch seasonal collections.	Seoul, South Korea <i>Sep 2023 – Dec 2023</i>

LEADERSHIP

Design and Engineering Club <i>Founder & President</i> Led design and engineering initiatives for a cross-disciplinary student community founded from zero, setting strategy, mission, and programming for 50+ members.	NYU <i>May 2023 – Dec 2024</i>
Women in Computing <i>Event Coordinator</i> Organized on-campus recruiting events with Meta, Google, and Goldman Sachs; supported 30+ women through portfolio reviews and networking, contributing to their successful job placement.	NYU <i>May 2023 – Dec 2024</i>

SKILLS & INTERESTS

Agentic AI & Technical: Claude Code, Claude MCP, Cursor, Codex, Figma Make, VO, Figma Plugin API, HTML/CSS, Python
Design & Research: Figma, Principle, Adobe CS (Ae, Pr, Ai), User Flows, Wireframing, High-Fidelity Prototyping, Visual Design, User Interviews, Usability Testing, A/B Testing, Affinity Mapping, Squarespace, Framer, Vercel
Languages: English, Korean (native)
